SOUTHERN BLUE

Australia's leading AdBlue® suppliers

At Southern Blue, we manufacture and distribute certified AdBlue® across Australia from remote true blue country towns, to the red dirt, to the seaside and to major city commercial sites. Whether you're a small business or a large-scale operation, we deliver reliable, high-quality solutions tailored to your needs. Backed by commitment to service, we're here to keep your fleet moving and your emissions compliant.

ABOUT SOUTHERN BLUE

At the heart of our business is a simple promise: to deliver high-quality, certified AdBlue® to every corner of Australia- reliably, efficiently, and with integrity. We're a proudly family-owned and operated company, built on the strong values and hard work of the Harker family, whose roots run deep in Australia's trucking industry. With a bloodline of truck drivers and generations of experience behind the wheel and behind the scenes, we understand firsthand the importance of dependable fuel additives and cleaner transport solutions. That's why we've committed ourselves to producing certified AdBlue® to the highest quality standards, ensuring your engines stay compliant, and your operations keep moving.

Certified to produce AdBlue® to the highest standards, we are committed to providing Australian-made, high-quality emission control solutions. If you're running a single vehicle in a remote country town or managing a large fleet in a commercial city, we deliver AdBlue® you can trust-wherever you are, whenever you need it.

Whether you're a small rural operator, a large commercial fleet, or an individual looking for a trusted supplier, we've got the solution. From the true blue country towns, across the red dirt heart of the outback, along the coastline, and into the industrial cities, we supply AdBlue® to all Australians - businesses and individuals alike.

As a team, we believe in more than just logistics. We're fueled by a passion for sustainability and a drive to contribute to a greener, cleaner Australia. Every litre we produce is a step toward lowering emissions and supporting a better future- for our families, our customers, and our country.

With trust, quality, and connection to community at the core of everything we do, we're proud to be the name Australians rely on for AdBlue®.

ABOUT **ADBLUE®**

AdBlue® is a high-purity, non-toxic urea-based solution used in modern diesel engines to reduce harmful emissions. It works as part of a system called Selective Catalytic Reduction (SCR), helping convert nitrogen oxide (NOx) — a major pollutant — into harmless nitrogen and water vapor.

Made from 32.5% urea and 67.5% deionised water, AdBlue® is not a fuel additive and is stored in a separate tank in your vehicle. It's essential for keeping diesel engines compliant with strict environmental regulations and contributes to a cleaner, greener Australia.

Southern Blue proudly manufactures certified, high-quality AdBlue® to meet ISO standards, ensuring your engine runs efficiently while reducing its environmental impact

OUR **ADBLUE®**

At Southern Blue, we're proud to produce premium-grade AdBlue® right here in Australia. Every litre is manufactured to meet the highest international standards (ISO 22241) in our state-of-the-art production facility, ensuring purity, consistency, and performance that diesel engines can rely on.

MANUFACTURED TO THE HIGHEST STANDARDS

Our AdBlue® is made using ultra-pure demineralised water and high-grade automotive urea, carefully blended under strict quality controls. We maintain a closed manufacturing system, which prevents contamination and guarantees that every batch meets OEM and international specifications.

We test every stage of production – from raw materials to final packaging – to ensure compliance with the most demanding standards. The result is a high-performance, clean, and stable product that helps your vehicles run efficiently and reduce emissions.

AUSTRALIAN-MADE AND LOCALLY BACKED

Proudly Australian-made and owned, Southern Blue supports local industry and supply chains. By manufacturing here at home, we're able to guarantee product freshness, supply reliability, and faster delivery times – even to regional and remote areas.

Our local production also means reduced carbon footprint, reinforcing our commitment to sustainability and environmental responsibility.

TRUSTED BY PROFESSIONALS NATIONWIDE

Southern Blue AdBlue® is trusted by transport fleets, agricultural operators, and machinery owners across Australia. Whether you need bulk deliveries, packaged product, or on-site solutions, we're committed to helping our customers run cleaner, smarter, and more sustainably.

OUR IMPACTS

ENVIRONMENT

AdBlue® is used in diesel vehicles equipped with Selective Catalytic Reduction (SCR) systems. When injected into the exhaust, it helps convert harmful nitrogen oxides (NOx) into harmless nitrogen and water vapor.

- NOx is one of the major contributors to air pollution, acid rain, and smog.
- By drastically cutting NOx emissions, AdBlue® enables vehicles to meet stringent Euro 6 and other global emission standards, making them far more eco-friendly.
- This directly supports governments' and companies' efforts to reduce their carbon footprint and improve sustainability.

HEALTH

Reducing NOx emissions isn't just about the environment; it's also about public health.

- NOx gases are harmful when inhaled, leading to respiratory problems, asthma, cardiovascular diseases, and even premature death in severe pollution zones.
- AdBlue® helps protect communities, particularly urban populations who are most exposed to diesel exhaust, by lowering these hazardous emissions.
- Cleaner air means fewer hospital admissions and overall improvements in quality of life.

OUR IMPACTS

VEHICLE PERFORMANCE & FUEL EFFICIENCY

AdBlue® plays a key role in ensuring modern diesel engines can deliver both power and compliance.

- Engines can maintain higher performance without being restricted by emission-limiting compromises.
- It prevents engine derating or warning-light issues that occur if emission standards are breached.
- Vehicles equipped with AdBlue® systems generally enjoy a longer engine life, as the SCR process reduces the strain on internal engine components.
- Fleet operators also benefit from legal compliance, avoiding heavy fines for non-compliance with emission regulations.
- Without SCR and AdBlue®, engines would have to run at lower combustion temperatures or with altered fuel-air ratios to reduce NOx – which often means worse fuel economy.
- With AdBlue® handling the emissions post-combustion, engines can be optimized for maximum fuel efficiency and performance.
- This translates into cost savings for drivers and fleet operators over time.

50L UTE TANK

Built tough for tradies, fleet operators, and off-road users, our AdBlue 50L 12V Ute Tank delivers a reliable and portable solution for dispensing AdBlue wherever the job takes you. Compact enough to fit neatly in ute trays yet robust enough for daily use, it's designed with efficiency, security, and ease of operation in mind.

Our 50L tank is ideal for on-site refills and remote work locations, helping reduce downtime and keeping vehicles and machinery running smoothly no matter where you are working. Its practical design makes it a dependable choice for both commercial and off-road applications.

With a quick and simple setup using 12V power, the tank requires no external power source, making it easy to use in the field. Combined with its durable construction, it is built to withstand harsh Australian conditions and the demands of everyday use.

Features:

- High-quality manual nozzle
- Pad lockable filling cap
- 12 V self-priming diaphragm pump
- 30 min. on/off duty cycle

Specifications:

- 50 L Transfer Tank
- 17 L/min Open Flow
- 4 m of 3/4" delivery hose
- 4 m electric cable
- Size: 570 x 380 x 450 mm
- Pump Weight: 12 kg

100L UTE TANK

Designed for higher-capacity needs, our AdBlue 100L 12V Ute Tank is the ideal solution for fleet operators, workshops, and remote worksites that require reliable AdBlue dispensing with fewer refills.

With its increased capacity and robust design, it delivers dependable performance while remaining practical for ute and service vehicle installations.

Equipped with a high-quality manual nozzle, the tank allows for clean, accurate dispensing to minimise waste and spills. A pad-lockable filling cap adds an extra layer of security, helping protect your AdBlue supply from contamination or unauthorised access.

Powered by a 12V self-priming diaphragm pump, this unit provides consistent flow and easy operation directly from your vehicle's power supply. Built tough to handle demanding Australian conditions, the 100L AdBlue tank is a reliable, efficient choice for keeping vehicles and equipment running smoothly on the job.

Features:

- High-quality manual nozzle
- Pad lockable filling cap
- 12 V self-priming diaphragm pump

Specifications:

- 100 L Transfer Tank
- 17 L/min Open Flow
- 4 m of 3/4" delivery hose
- 4 m electric cable
- Size: 910 x 460 x 530 mm
- Pump Weight: 15 kg

200L UTE TANK

For operations that demand higher volume capacity and maximum durability, our AdBlue 200L Transfer Tank is engineered to perform in tough working environments. Designed with longevity and practicality in mind, this tank is well suited to fleet depots, agricultural use, workshops, and remote worksites where reliability is critical.

Manufactured with thicker tank walls, achieved through the use of increased raw materials in the moulding process, the tank offers enhanced strength and impact resistance. Quality imported raw materials provide excellent UV protection, helping maintain structural integrity and performance in harsh Australian conditions. The tough poly construction eliminates seams and welds, reducing the risk of cracking, corrosion, or leaks over time.

The tank comes complete with a quality 12V self-priming AdBlue-compatible transfer pump, hose, and nozzle, delivering a ready-to-use solution straight out of the box. Simple and effective tie-down locations make securing the tank during transport straightforward, while recessed forklift tine locations allow for safe and efficient handling when moving or positioning the tank.

Built for heavy-duty applications, the 200L AdBlue tank provides a robust, practical solution for high-volume AdBlue storage and dispensing.

Features:

- High-quality manual nozzle
- Pad lockable filling cap
- 12 V self-priming diaphragm pump
- 30 min. on/off duty cycle

Specifications:

- 200 L Transfer Tank
- 23 L/min Open Flow
- 4 m of 3/4" delivery hose
- 4 m electric cable
- Size: 1,100 x 810 x 470 mm
- Pump Weight: 34 kg

12

400L UTE TANK

At the top end of the range, our AdBlue 400L Elite Cube Tank is designed for serious capacity, premium performance, and professional applications. Ideal for fleet depots, workshops, and high-usage environments, this elite model combines efficient storage with reliable, user-friendly dispensing.

The cube-style design maximises storage capacity while maintaining a compact footprint, making it easy to position in workshops, sheds, or on service vehicles where space efficiency matters. A high-quality manual nozzle ensures clean, controlled dispensing, while the pad-lockable filling cap provides added security and protection against contamination.

Powered by a 12V self-priming diaphragm pump, the tank delivers consistent and dependable flow. With a 30-minute on / 30-minute off duty cycle, it is well suited to frequent refilling tasks without compromising pump longevity. Built to a premium standard, the 400L Elite Cube Tank is the ultimate solution for high-volume AdBlue storage and dispensing.

Features:

- High-quality manual nozzle
- Pad lockable filling cap
- 12 V self-priming diaphragm pump
- 30 min. on/off duty cycle

Specifications:

- 400 L Transfer Tank
- 26 L/min Open Flow
- 4 m of 3/4" delivery hose
- 4 m electric cable
- Size: 1,130 x 810 x 720 mm
- Pump Weight: 47 kg
